## Straw Activity

1. You and your partner will construct many different triangles and record all of your findings in the table below. Choose 3 straws to construct your triangles and record the side lengths in the table. Do not make equilateral triangles. For each group of straws, tell whether they compose a triangle or not.

| Side length 1 <br> (Shortest side) | Side length 2 | Side length 3 <br> (Longest side) | Does this make a <br> triangle, yes or no? |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

Name: $\qquad$
2. What pattern do you notice in the table? What do you notice about the side lengths that made a triangle and the side lengths that did not make a triangle?
3. Choose one set of straws that did not make a triangle. S1 $\qquad$ S2 $\qquad$ S3 $\qquad$ What could you change about the third side so that they would construct a triangle?
4. Now, take a full straw and cut it into 3 pieces (each of a different length) so that you are able to construct a triangle from these 3 pieces. Trace this triangle on the paper and label the dimensions of each side of the triangle.
